

Final Assignment: Economic Complexity Report

Your final assignment is to create a report analyzing the economies of the imaginary countries presented in class. The report should consist of **five one-page sections**, the first four focusing on a different aspect of economic complexity and the last one reserved for a description of the group work:

1. Descriptive Statistics

- Provide key statistics on the countries, including measures of **economic diversification** and **specialization**.
- Analyze the **ubiquity** of products and activities.

2. Economic Complexity and Fitness Measures

- Compute and compare the **Economic Complexity Index (ECI)** and **Fitness** for countries.
- Calculate the **Product Complexity Index (PCI)** and **Activity Complexity** for activities.
- Discuss the differences between these methodologies and how they affect country rankings.

3. Relatedness Between Activities

- Visualize and discuss the **relatedness** between economic activities.
- Provide a graphical representation (e.g., network diagram or heatmap) illustrating the connections between different sectors.

4. Diversification Strategies

- Propose **policy recommendations** for each country based on their economic complexity and relatedness analysis.
- Suggest possible **diversification paths** into new industries.

5. Workflow and Contributions

- Describe your team's workflow, including how you organized meetings and made decisions.
- **Provide a breakdown of each member's contribution to the final project.**

The first 4 sections should each include **one or two graphical elements** (such as charts, tables, or network diagrams) and **100-300 words** of explanation.

In addition to the report, you must submit a **Python notebook** that replicates all analyses. The notebook should be well-documented and structured to support the findings in your report.

Please note that these are the minimum requirements for the assignment. If you have the data and are willing to work on a more complex project, while respecting the maximum length and covering all minimum requirement points, you are welcome to do so.

Workflow & Collaboration

The group should work together from July 1 until July 10 at 12:00 PM CEST (Mid-day), where the deadline to submit the assignment and slides is set. You should self-organize your own meetings and planning sessions.

Remember to include a **one-page section** summarizing your **team's workflow** and the **contribution of each member** to the final project.

Deadline & Submission

The final assignment (report, notebook and presentation slides) is due by **July 10 at 12:00 PM CEST (Mid-day)**. Please submit your work by sending the three files (report, notebook and presentation slides) by email to vis@merit.unu.edu . Only one person per group needs to submit the group work.

On **Monday, July 13, at 13:00 CEST**, we will hold the final session. Groups will have **5 minutes** to present their assignments and receive feedback from other groups and the instructor. Only one group member should do the presentation, but the others should be present as the instructor can ask questions to anyone.

Good luck, everyone!
